

It is week 5 of a season that is the whole market. Trade season peaks weeks 4–10; the deadline lands weeks 11–13. Judge every item below by one question: **does it help us sell before the deadline?**

AGENDA

2 hours · timeboxes are the agenda

Time	Item	Outcome we leave with
0:00	1. Where we stand Andrew presents, no debate	Shared picture: what is live, what is dark, what is blocked on us and not on code.
0:10	2. Do we feel good about the product?	Each of us has used it on our own league, on a phone, this week. Three answers (below). The launch gates agreed.
0:40	3. Marketing plan	The open decisions in <i>launch/ROLLOUT_PLAN.md</i> made. Hours per week named. Channels cut to fit.
1:10	4. Company name	Criteria agreed first. A shortlist of three to screen this week. Final call in seven days, not tonight.
1:30	5. What is not on the list	Cofounder terms, money, legal exposure, support, kill criteria, roles for 30 days.
1:50	6. Close	Three to-dos each, with dates. Next meeting booked.

1 · WHERE WE STAND

- **Live** at penthousefantasy.com on the real API. Sleeper and public ESPN work end to end.
- **Private ESPN** works through the bookmark (the “Penthouse key”). Never tapped through on a real iPhone.
- **Yahoo** is built and dark until Yahoo approves the app (applied Sep 28).
- **Pricing decided:** free tier · \$4.99 week pass · \$24.99 season pass (\$19.99 mid-week) · \$2.99 extra league.
- **Admin and telemetry** built: six tabs of funnel, revenue, retention numbers. Reading zero until the Stripe events and pixel ids are in.
- **Tests:** 1,375 Python, 391 node, browser smoke at 375px. CI gates on all of it.

2 · THREE QUESTIONS ON THE PRODUCT

Make it concrete or it becomes vibes. Both of us connect a league we actually play in, on a phone, and read this week’s calls out loud. Then:

1. **Would you pay \$4.99 for what you just saw?** If not, which of the three moves failed you?
2. **Is Lock honest?** It delivers 75% and people read it as 80%. The calibrated model is wired in. Enough, or do the tag names change?
3. **Which one screen would embarrass us in a Reddit screenshot?** Fix only that one.

3 · MARKETING PLAN

start from launch/ROLLOUT_PLAN.md, do not start from zero

The one loop that matters: a verdict card pasted into a league chat. Everything else is secondary until that loop shows a conversion.

The week, by day: waiver content Tue · verdict cards Wed · email Thu · start/sit content Sat night · “were we right” Mon.

Decide tonight:

- ☐ Whose Reddit and X accounts. Plan says Andrew’s own, with disclosure.
- ☐ Real hours per week, each of us. Plan assumes ~5 through week 17. Cut Discord first, then X, never the Monday post.
- ☐ Paid ads before the Sleeper licensing reply: yes or no. Plan says no spend until they answer.
- ☐ Who sends the Sleeper licensing email, and when. It is still the first action on the list.

Launch gates · **no public post until all five are true**

- ☐ **ANDREW** Turn `EDGE_DEV` off on Render. While it is on, anyone can claim any email with a header. Security hole, not a nit.
- ☐ **ANDREW** Real Stripe test-mode run: subscribe, renew (test clock), cancel, refund a renewal.
- ☐ **ANDREW** Tap the ESPN key through on a real iPhone against a real private league.
- ☐ **ANDREW** Set the support email on Vercel. Today nobody can reach us.
- ☐ **ANDREW** Stripe: add `invoice.paid` and the three new webhook events; enable the customer portal.

Switched off, by choice or by waiting

- **Twilio** → phone sign-in is dark; the door is email and password.
- **Resend** (paused by Andrew) → no reset mail, no Thursday email, unpaid sign-ups unreachable.
- **Pixels and PostHog** → ad numbers and churn read zero until the ids are pasted in.
- **Yahoo** → waiting on Yahoo.

What we cannot say in public yet

- ✗ Any decision-accuracy figure. Nothing is scored on a real week.
- ✗ A user count or a testimonial. None exist. Nothing invented.
- ✗ “80% of Locks hit.” The measured figure is 75%.
- ✗ “Yahoo” on the landing page until it is actually on.

First honest proof point, and when:

4 · COMPANY NAME

criteria first, names second

This would be the **fourth name** (Edge → The Booth → Penthouse). Agree why Penthouse fails before anyone says a new one.

1. **Is it the word?** “Penthouse” carries the magazine. It will come up in every pitch and every thread.

2. **Is it trademark?** The screen on classes 9, 41, 42 was never done. Do it before falling for any name, this one included.

3. **What does a rename cost?** Domain, the mark in four places, one vocab file, OG images, social handles. About a day of work. The real cost is throwing away recognition mid-season.

Shortlist to screen this week (trademark + domain + handles)

Keep Penthouse? ☐ yes ☐ no ☐ decide by _____

5 · WHAT IS NOT ON THE LIST

- **Cofounder terms.** Equity split, vesting, who decides what, what happens if one of us stops. Settle before revenue exists.
 - **Money.** Who owns Stripe, the bank account, Vercel and Render bills. Monthly burn. LLC before the first dollar?
 - **Legal exposure, ranked.** Sleeper’s terms want a conversation about commercial use. The ESPN bookmark reads cookies; the password route is against ESPN’s terms. Player headshots have an NIL question (recommendation on file: ship with photos off). Which get a lawyer, which do we accept?
- **Support.** Who answers, how fast. The site promises a 14-day refund, no reasoning required. Make sure we both mean that.
 - **Kill or continue.** Two numbers for three weeks (paid conversions, share-card opens). Agree in advance what number means stop.
 - **The accuracy program.** The one thing that lets marketing say something true and strong. Blocked because the weekly job cannot reach the production database. Unblock it or not?
 - **Roles, next 30 days.** One owner for product, one for distribution. Names: _____

TO-DO LIST

ANDREWCOFOUNDERBUILD

This week

- ☐ ANDREW EDGE_DEV off on Render. Verify with the curl in HANDOFF.
- ☐ ANDREW Stripe test-mode run, all four steps.
- ☐ ANDREW Stripe webhook events + customer portal + EDGE_BILLING_PORTAL_URL.
- ☐ ANDREW ESPN key on a real iPhone, real private league.
- ☐ ANDREW Support email on Vercel.
- ☐ COFOUNDER Use the app on your own league, on a phone, before the meeting.
- ☐ COFOUNDER Send the Sleeper licensing email (draft in ROLLOUT_PLAN §8).
- ☐ COFOUNDER Trademark screen on Penthouse and the shortlist.
- ☐ COFOUNDER Domain and handle check on the shortlist.

Decisions to record

- ☐ Keep or rename. If rename: the name, and the date.
- ☐ Hours per week, each. Channels kept.
- ☐ Paid ads before Sleeper answers: yes / no.
- ☐ Photos on launch: on / off.
- ☐ Scouting board stays free: yes / no.
- ☐ Kill criteria: the two numbers and the line.

Next two weeks

- ☐ ANDREW PostHog project + three ad accounts; ids into Vercel.
- ☐ ANDREW Twilio on, or decide phone sign-in waits.
- ☐ ANDREW Resend on, or decide the Thursday email waits. (Lead magnet on the landing page depends on it.)
- ☐ ANDREW Yahoo: when approved, create the app and set the three env vars.
- ☐ BUILD Score one real week (score_runs.py has never seen live data). Needs the database reachable from the job.
- ☐ BUILD Rest-of-season numbers from ESPN too, so Trade Lab and the wire match the app (EP-1, about a day).
- ☐ BUILD Two screen recordings of the ESPN key walk (iPhone, Android), after it is proven.
- ☐ BUILD If renaming: mark ×4, vocab, OG images, domain, one commit.

Already done, so it is not re-litigated

- ☒ Pricing: week pass, season pass, no à la carte.
- ☒ Standings, trade preview, last week’s calls: free.
- ☒ Landing page drops the 80% figure; honest rates on the depth chart.
- ☒ Accounts are first-party; upgrades are free grants until Stripe is live.
- ☒ Paywall is a haze, not a wall. One free GM in the office.
- ☒ ESPN leagues show ESPN’s own weekly number.

6 · Close

Andrew, three things by _____

Next meeting: _____

Cofounder, three things by _____
